## English Electric ‘DELTIC' diesel locomotive

Thank you for your choice of the Graham Farish English Electric 'DELTIC' diesel locomotive.

## Running in

The mechanism of this model requires running in (without a load) for approximately 1 hour in each direction at moderate speed.

## Curves

This locomotive performs best on 12" radius curves but it will operate on 9 " radius curves.

## Body removal

The bodyshell clips over the chassis and can be removed by carefully easing away from the chassis.

## Lubrication

When required, sparingly lubricate the motor bearings using plastic compatible light oil and the gear train with model grease. Suitable lubricants are Bachmann E-Z Lube item 99984 or Woodland Scenics 'HobbyLube' Lite Oil item HL654.

## DCC Decoder fitting

The model has a NMRA/NEM 651 6-pin decoder socket.

Follow the instructions supplied with the decoder. Remove the blanking board and fit the decoder, aligning as shown. We recommend that the model is run in first using a DC supply before fitting a decoder.

## Buffer beam parts

Pipes, cosmetic coupling hook and protector plate can be fitted as an alternative to the functional coupler. A spare bogie frame is enclosed should it be wished to remove the coupling pocket.

## Bachmann Europe Plc

Moat Way, Barwell, Leicestershire, LE9 8EY 01455841756
www.bachmann.co.uk
Deltic rev 1 06/10
